Respected Sir,

Arun A Sheth & Company's, mission for the last 67 years is to improve the quality of life for people in India by making affordable water available to them through innovative, efficient and sustainable solutions. We constantly thrive for better technology in the piping industry where we can transport water through closed pipe by effective and affordable means to our customers.

In the same way, we were the 1<sup>st</sup> to introduce PVCO Pipe in India where we laid 315PN16 PVCO PIPE of 6Kms for a private lift irrigation scheme in 2015. Since then we are passionately pushing ourselves hard to promote PVCO in Agriculture as well as Irrigation sector.

In this new year 2024, it gives us immense pleasure in informing you that we AASCO & Molecor Inc. Spain have officially joined hands and we are the sole channel partners for **PVCO Fittings & Machine spare parts PAN India**. Molecor is the only manufacturing company in PVCO fittings across the world in the name of **ecoFITTON®**.

**ecoFITTON®, the first fittings in the world in PVC-O**, present excellent improvements in the mechanical properties of PVC. These improvements allow to manufacture **ecoFITTON®** consuming less raw material and less energy obtaining a product with higher hydrostatic resistance and higher resistance to impact than fittings of other materials. Besides this, **ecoFITTON®** presents an excellent behavior against water hammer, complete watertight, maximum chemical resistance and ductility.

With **ecoFITTON®** Molecor offers a continuous system in PVC-O; this material continuity guarantees the same hydraulic and mechanical properties in the different elements of the network, in the pipes as well as in the fittings.

This fact, guarantees, at the same time, total water quality and, as it has just been said, an important reduction of the water hammer effect.

Molecor's commitment to environment can also be seen in the **ecoFITTON®** manufacturing process. This is a 100% recyclable product for which manufacture it is necessary a lower quantity of raw material but offering, at the same time, the best properties for the conveyance of water under pressure.

These fittings can be used in networks for the transportation of drinking water, irrigation systems, industrial applications, sewage, infrastructure networks, fire protection nets, etc. among other applications.

AASCO prides itself on its ability to offer a fast, reliable and flexible delivery services to meet customer's requirements. The ability to react quickly has resulted in a long-standing relationship with many of our customers. However large or small, orders can be progressed promptly with next day delivery when required.
